

Week 4

Exercise 1

In this exercise I have created a new folder for exercise 1 and initialize npm. Create a index.js file and install express package to run nodejs application

```
deenalain > week_4 > exercise_1 > JS index.js > ...
1  const express = require("express");
2  const bodyParser = require("body-parser");
3  const app = express();
4
5  app.use(bodyParser.urlencoded({ extended: true }));
6
7  app.get("/", (req, res) => {
8    res.send("hello it is my first express application");
9  });
10
11 app.listen(5000, () => {
12   console.log("server is running on port 5000");
13 });
14
```

Output:

```
D:\Projects\deenalain\week_4\exercise_1>node index.js
server is running on port 5000
█
```

Exercise 2

In this exercise I have created two more endpoints. In first endpoint the response will be a basic express application.

In the second endpoint it returns the book id as param

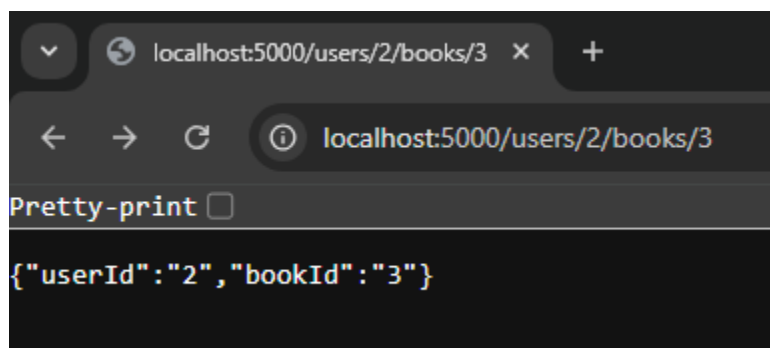

```
14
15
16 // Exercise 2
17
18 app.get("/about", (req, res) => {
19   res.send("This is a basic express application");
20 });
21
22 app.get("/users/:userId/books/:bookId", (req, res) => {
23   res.send(req.params);
24 });
25
26
```

Endpoint 1

This is a basic express application

Endpoint 2

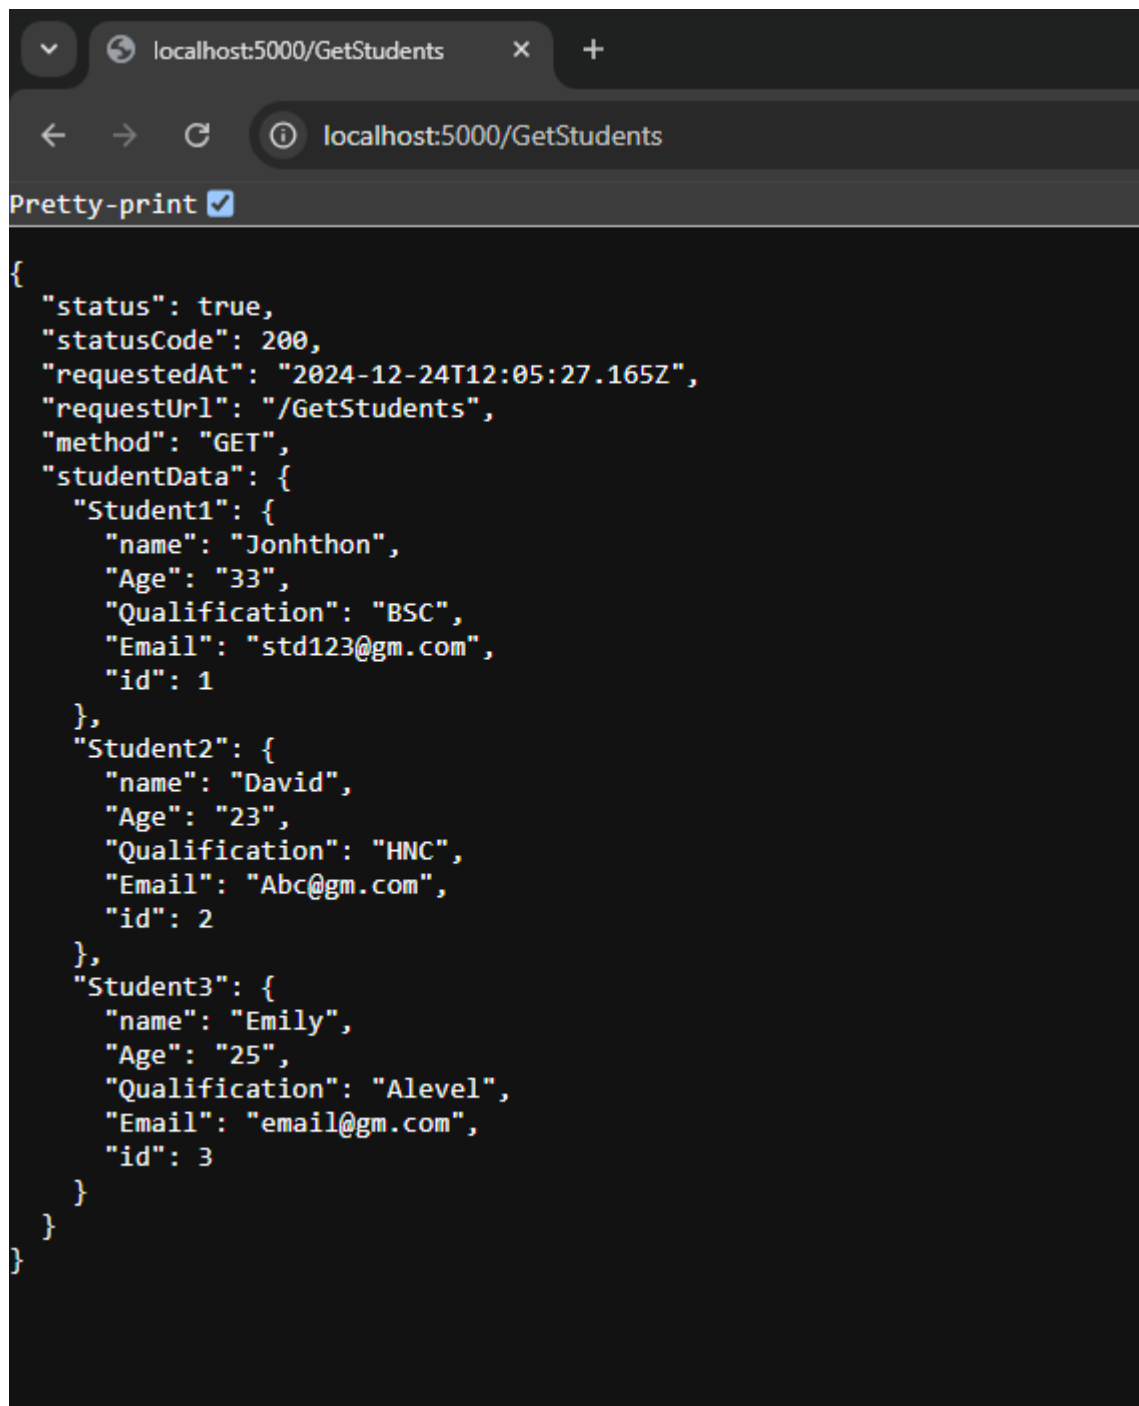

Exercise 3:

In this exercise I have created two more endpoints. In first endpoint the response will be about endpoint status and list of students.

In the code the fs (file system) package is being used to read the json file from the system and __dirname returns the root folder of application.

```
const fs = require("fs");

app.get("/GetStudents", (req, res) => {
  fs.readFile(__dirname + "/Student.json", "utf8", (err, data) => {
    if (err) throw err;
    res.json({
      status: true,
      statusCode: 200,
      requestedAt: new Date().toISOString(),
      requestUrl: req.url,
      method: req.method,
      studentData: JSON.parse(data),
    });
  });
});
```

```
{
  "status": true,
  "statusCode": 200,
  "requestedAt": "2024-12-24T12:05:27.165Z",
  "requestUrl": "/GetStudents",
  "method": "GET",
  "studentData": {
    "Student1": {
      "name": "Jonhthon",
      "Age": "33",
      "Qualification": "BSC",
      "Email": "std123@gm.com",
      "id": 1
    },
    "Student2": {
      "name": "David",
      "Age": "23",
      "Qualification": "HNC",
      "Email": "Abc@gm.com",
      "id": 2
    },
    "Student3": {
      "name": "Emily",
      "Age": "25",
      "Qualification": "Alevel",
      "Email": "email@gm.com",
      "id": 3
    }
  }
}
```

On GetStudentid endpoint by passing ids from 1-3 it returns the student details as we can see in below screenshots

localhost:5000/GetStudentid/1

localhost:5000/GetStudentid/1

Pretty-print ☒

```
{
  "name": "Jonhthon",
  "Age": "33",
  "Qualification": "BSC",
  "Email": "std123@gm.com",
  "id": 1
}
```

localhost:5000/GetStudentid/2

localhost:5000/GetStudentid/2

Pretty-print ☒

```
{
  "name": "David",
  "Age": "23",
  "Qualification": "HNC",
  "Email": "Abc@gm.com",
  "id": 2
}
```

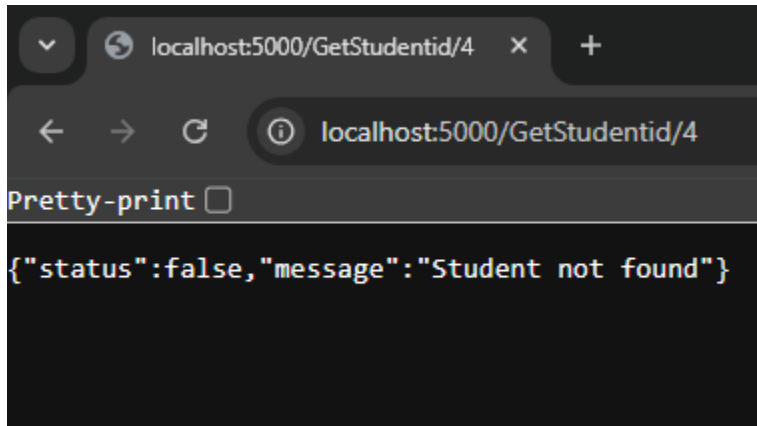

localhost:5000/GetStudentid/3

localhost:5000/GetStudentid/3

Pretty-print ☒

```
{
  "name": "Emily",
  "Age": "25",
  "Qualification": "Alevel",
  "Email": "email@gm.com",
  "id": 3
}
```

On student id 4 it returns false status with a message "Student is not found" since it doesn't exist in the json file.

Exercise 4

In this exercise I have created two endpoints. In the first one, it returns the studentinfo form in HTML where you can add all his details. In the second endpoint, once the user fills the form and hits the submit button, the data will be sent to the second endpoint and returned as a response as in the attached screenshots.

```
// Exercise 4

app.get('/studentinfo', function (req, res) {
  res.sendFile('StudentInfo.html', { root: __dirname });
})

app.post('/submit-data', function (req, res) {
  var name = req.body.firstName + ' ' + req.body.lastName + ' ';
  var Age = req.body.myAge + ' Gender: ' + req.body.gender + ' ';
  Qual = ' Qualification' + req.body.Qual
  console.log(req.body.Qual)
  res.send({
    status: true,
    message: 'form Details', data: {
      name: name, age: Age, Qualification: Qual,
    }
  });
});
```

Student Enrollment Form

localhost:5000/studentinfo

CN5006 Lab Session Week4 Prepared by Dr. N.Qazi

Student Details

First Name:

Last Name :

Email:

Age :

Please select your gender:

- ☒ **Male**
